Variability Mask

# Local Variability

- Local resolution estimate using windowed FSC
  - e2fsc.py and others
- ResMap
  - Based on local features visible in the map (local SNR estimate)
- Variance map
  - Statistical bootstrapping, make N maps and compute local variance

# ResMap

# Orientation Determination

...

728 Particles

1229 Particles

# How can we improve?

- Higher contrast particle images
  - Thinner ice
  - Better buffer
  - Intelligent use of dose
- Smarter similarity metric
- Local mask

# Multi-component Systems

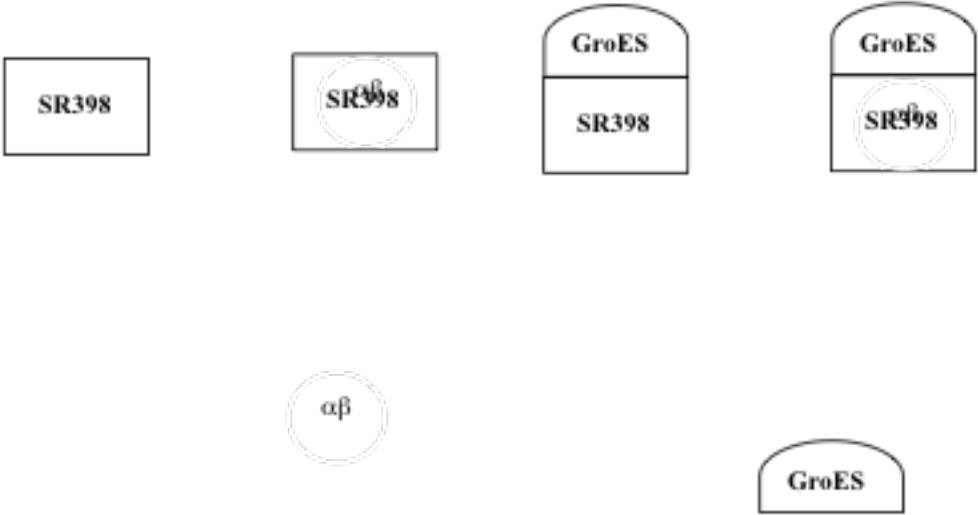

## GroEL, GroES & Substrate

mitochondrial branched-chain  $\alpha$ -ketoacid dehydrogenase

Chen D-H, Song J-L, Chuang DT, Chiu W, Ludtke SJ. An expanded conformation of single-ring GroEL-GroES complex encapsulates an 86 kDa substrate. *Structure*. 2006. 14(11):1711-22.

## SR398+GroES+Mg-ATP

Can we subtract what we don't want ?

2007

Can we subtract what we don't want ?

Projections

A lot of math →

**Spectrally matched projection  
(CTF, etc)**

Can we subtract what we don't want ?

**One Particle**

Can we subtract what we don't want ?

**Subtracted**

## Remove One Monomer

## Remove One Monomer

# Remove One Monomer

# Remove One Monomer

# Many particles

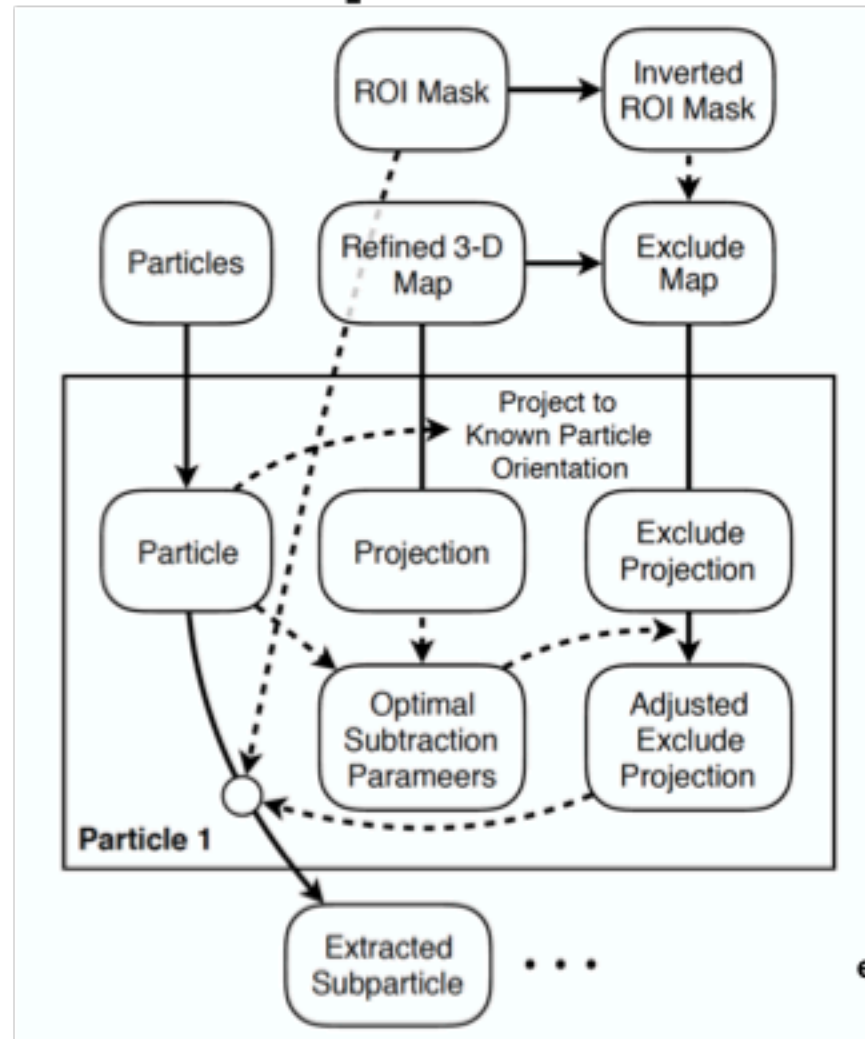

# Subparticles

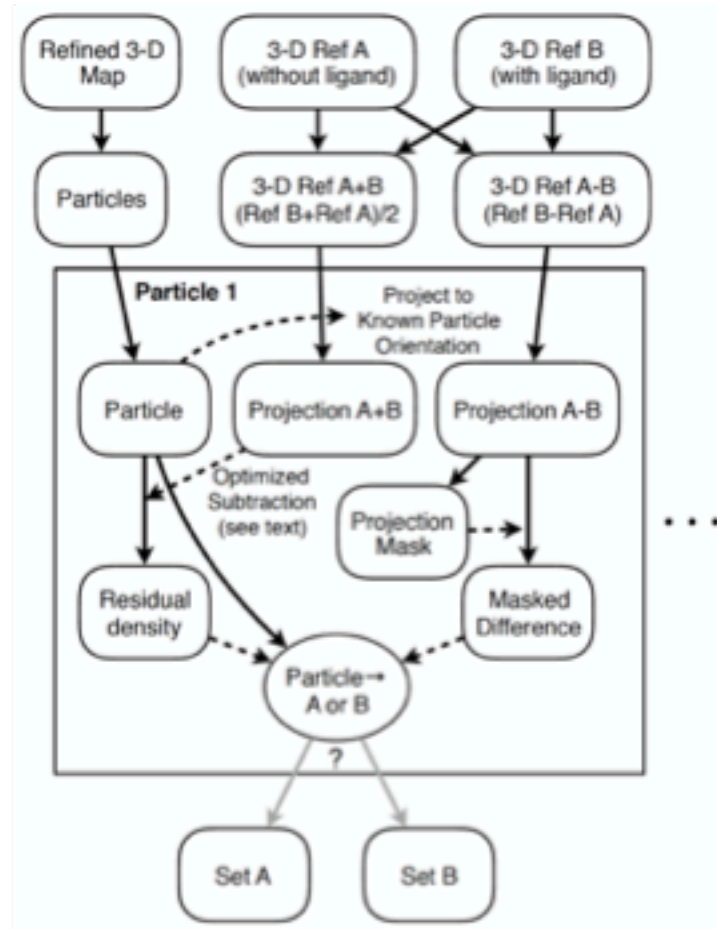

`e2extractsubparticles.py`

# Alternative?

Subtraction may not be mathematically useful, so:

- Make  $n$  copies of each particle
- Force each one to be in a specific asymmetric unit
- Do a refinement under a 3-D mask for one subunit
  - Align without mask, classify with?
  - Align and classify with mask?

# Examine Binary Separability
