GroEL 2005

- Native, unliganded GroEL, no ATP/ADP (?)
- JEOL 3000SFF (Yoshi-style) at LHe temp
- 6 microscopy sessions, Film
- 825 micrographs, Nikon 9000 @ 6.35 μm scan step
- 60k mag \rightarrow 1.06 $\text{\AA}/\text{pix}$
- 135 micrographs used \rightarrow 20,401 particles
- Defocus 1.2 - 2.2 μm

48

CTF Correction

Measured Image Ideal Particle Random Noise

$$\bar{M}(s, \theta) = \bar{F}(s, \theta)C(s)E(s) + \bar{N}(s, \theta)$$

$$C(s) = \sqrt{1 - Q^2} \sin \gamma + Q \cos \gamma$$

$$\gamma = -\pi \left(\frac{1}{2} C_s \lambda^3 s^4 - \Delta Z \lambda s^2 \right)$$

$$E(s) = e^{-Bs^2}$$

49

50

51

52

CTF Correction

Reconstruction Weight Measured image

$$\bar{T}(s, \theta) = \sum_i k_i \bar{M}_i(s, \theta)$$

$k_i = ?$

- Maximize SNR of $T(s, \theta)$
- Minimize RMSD between T and F

$$\sqrt{\sum_{x,y} (t(x,y) - f(x,y))^2}$$

53

CTF Correction

Wiener Filter	CTF Correction	SNR Weight
------------------	-------------------	---------------

$$\bar{T}(s, \theta) = \frac{F^2(s)R(s)}{1+F^2(s)R(s)} \sum_i \frac{1}{C_i(s)E_i(s)} \frac{R_i(s)}{R(s)} \bar{M}_i(s, \theta)$$

$$R_i(s) = \frac{C_i^2(s)E_i^2(s)}{N_i^2(s)} \quad R(s) = \sum_i \frac{C_i^2(s)E_i^2(s)}{N_i^2(s)}$$

69

70

How Do we Stop This ?

- ◉ (In EMAN) use classifier>3 for a few rounds
- ◉ Use several different (random) starting models and insure that you get a good answer
- ◉ Compare 3D models with results of 2D analysis

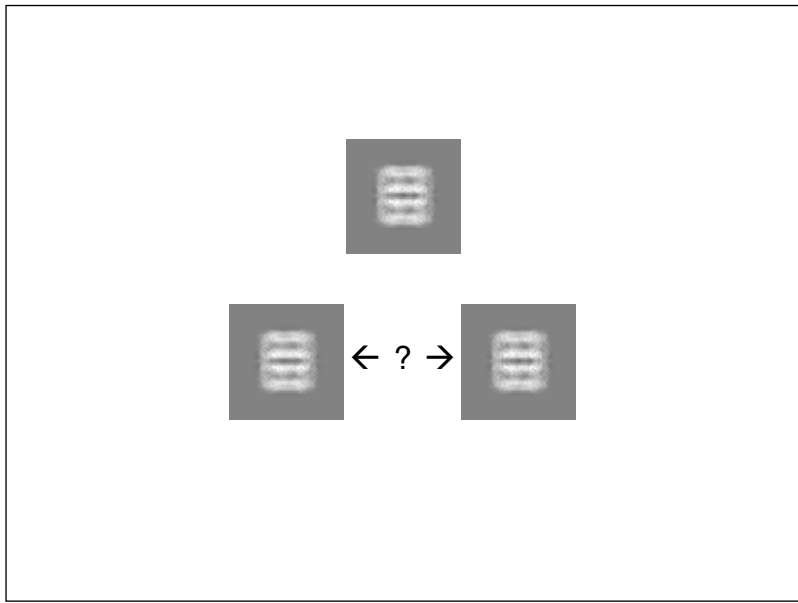

71

Measures of Similarity

72

73

74

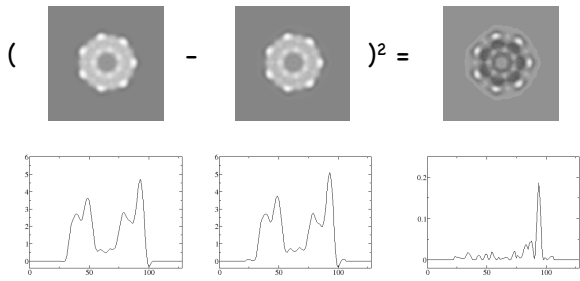

75

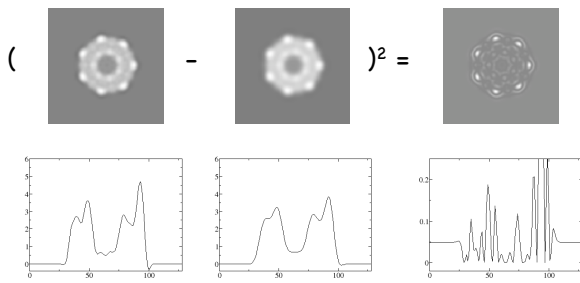

Measures of Similarity

- Correlation coefficient
- Variance (equivalent)
- Phase Residual
- FSC
- Mutual Information
- etc...

76

77

78

EMAN2

79

EMAN2 vs. EMAN1

- Improved CTF model
 - Automatic fitting, Astigmatism*, Energy filtered data
- New OpenGL based GUI
- Workflow infrastructure
- Embedded database for data storage and metadata archival
- EMEN2 Integration *
- Easily extensible image processing infrastructure
- New parallelism strategy ~
- CUDA support *

* - not yet ready for use

80

81

EMAN2 Architecture

82

Extensible Core

Type	Description	#
Processor	Generic image processing algorithms, filters, masks, thresholds, etc.	157
Aligner	Algorithms used to align 2 images or volumes to each other	11
Projector	Routines to generate 2-D projections of 3-D objects	7
Reconstructor	Routines to reconstruct 3-D objects from 2-D projections	11
Cmp	Similarity metrics used to compare two images or volumes	9
Averager	Average together stacks of images in various ways	9
Analyzer	Perform various operations on sets of images, such as classification or PCA	6
Orientgen	Routines describing how projections cover the asymmetric triangle	6

83

File Formats

 - ◀ xform.fourierorigin.tocenter

85

Similarity Metrics

(cmp)

With Default options, SMALLER -> more similar

- ◀ dot - dot product (negative by default)
- ◀ frc - Fourier ring correlation (weighted)
- ◀ optvariance - 'optimized variance' (EMAN1)
- ◀ phase - mean phase error
- ◀ quadmindot - Worst of quadrant dot products
- ◀ sqeuclidean - $\sum (a-b)^2/n$

86

Programs

- ◀ 49 Command-Line Programs (EMAN2)

syntax:

e2<name>.py --help

e2<name>.py <file> [--option=value] [--option] [-O]

<> - required parameter

[] - optional parameter

87

GUI

- e2desktop.py (may not be stable yet)
- e2workflow.py
- e2display.py
- and other programs with the --gui option

88

EMEN2

Electron Microscopy Electronic Notebook

89

The Database Problem

- Encourage good recordkeeping (automation)
- Find something after a person leaves the lab
- Reconstruct an experimental protocol refined over years
- Mine experimental data for new information
- Minimize db overhead/administration

90

Scientific Database

- Excellent mineability
- Good for centralized databases
- Limited flexibility
- Substantial overhead (design & maintenance)

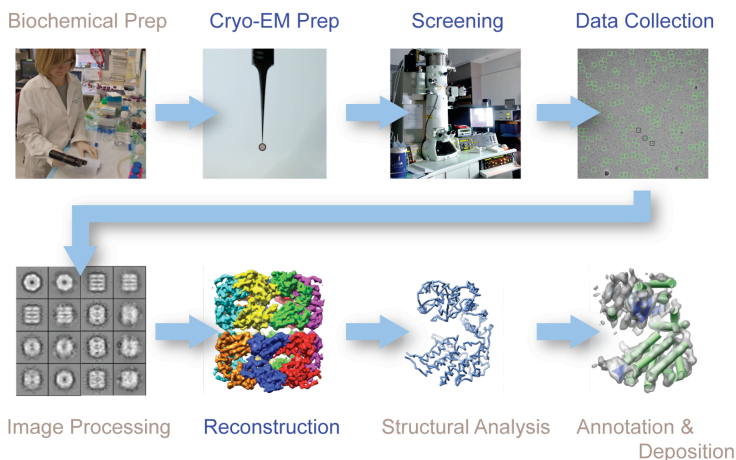

91

Electronic Lab Notebook

- Excellent flexibility
- Rich information content
- Limited mineability

92

Archive Entire Cryo-EM Pipeline

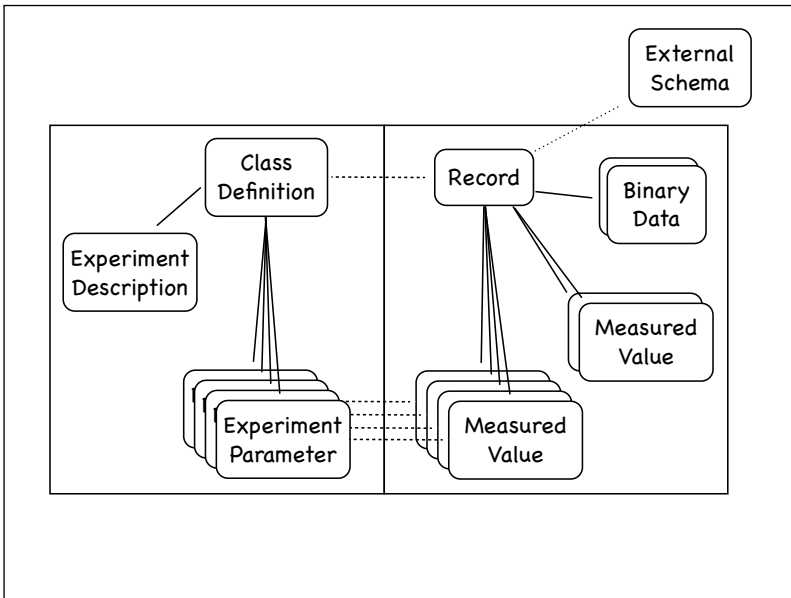

93

Object Oriented Database

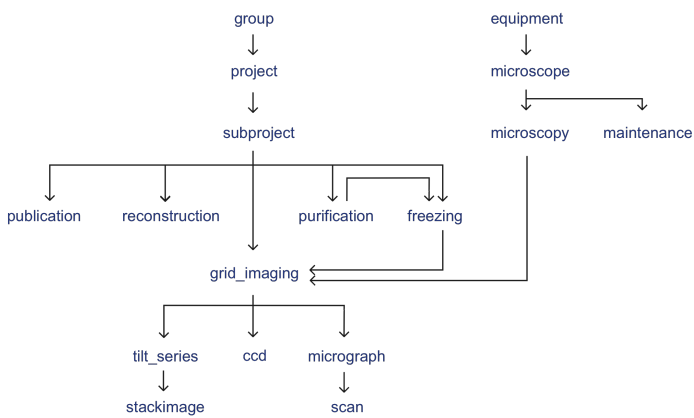

- ◀ Flexible records not tied to rigid definitions
- ◀ Connectivity between arbitrary records
- ◀ Queries not easily posed in a traditional database
- ◀ Per-record security
- ◀ Security and queries aware of record hierarchy

94

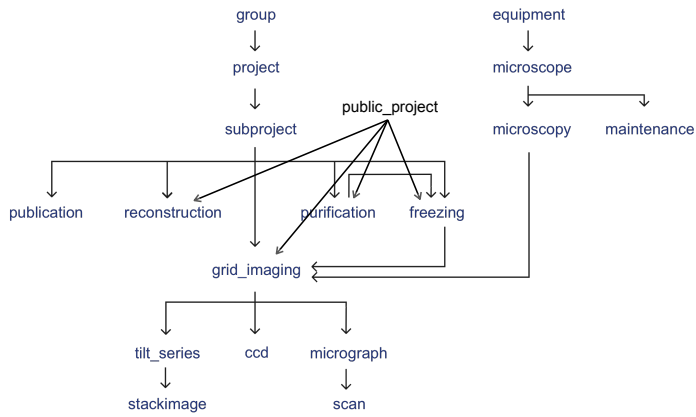

95

Record Organization

96

Record Organization

97

Analysis Tools

Records 1-100 of 101

Expt date	Intended defocus	Meas defocus	Set mag	Dose rate	Expos time	Performed by
